

*Bob's Magni, March 14 KGRE meeting. Didn't Bob say "You Can't Touch This"? Photo by Gerry Loeser.*

Members attending and telling stories:

Pres Dave Herrmann, VP Ray Brown, Dave Kayser, Gerry Loeser, Bob Heimbürger, Larry Miller, Bill Hammond, and Treas. John Wohaska

Bob flew his Magni. One topic of conversation was optimum prop pitch setting for a gyro. Bob says "the button marked Climb is best for take-off. The button marked Cruise is best for cruise". Seems simple enough.

## Seven members present, one gyroplane.

Meeting called to order by President Dave. J Wohaska stated we will need to elect three members for board of directors to progress with the reinstatement our non-profit corporate status. Dave renewed our web site for another three years. Cost was \$237.62, club reimbursed him.

General discussions commenced with topics like jump take-off modifications and Bill's Bensen/Parsons build. Rough field take-offs and what an extra 50# of mud in your wheel pants does for climb performance. Getting caught out flying near dark: are you able to safely land in low light conditions? How about a fly-in activity of observing and recording the glide slope for different gyros? Fun stuff.

Closed out the meeting for this time, We gathered around the only gyro present on the field before Bob took off for home. Bob's climb button must work, because he was off the ground in a few yards. **Next meeting is April 11**, at Greenville. We'll be electing board members.
